Caused
by
fungus

Stay out of blowing DUST

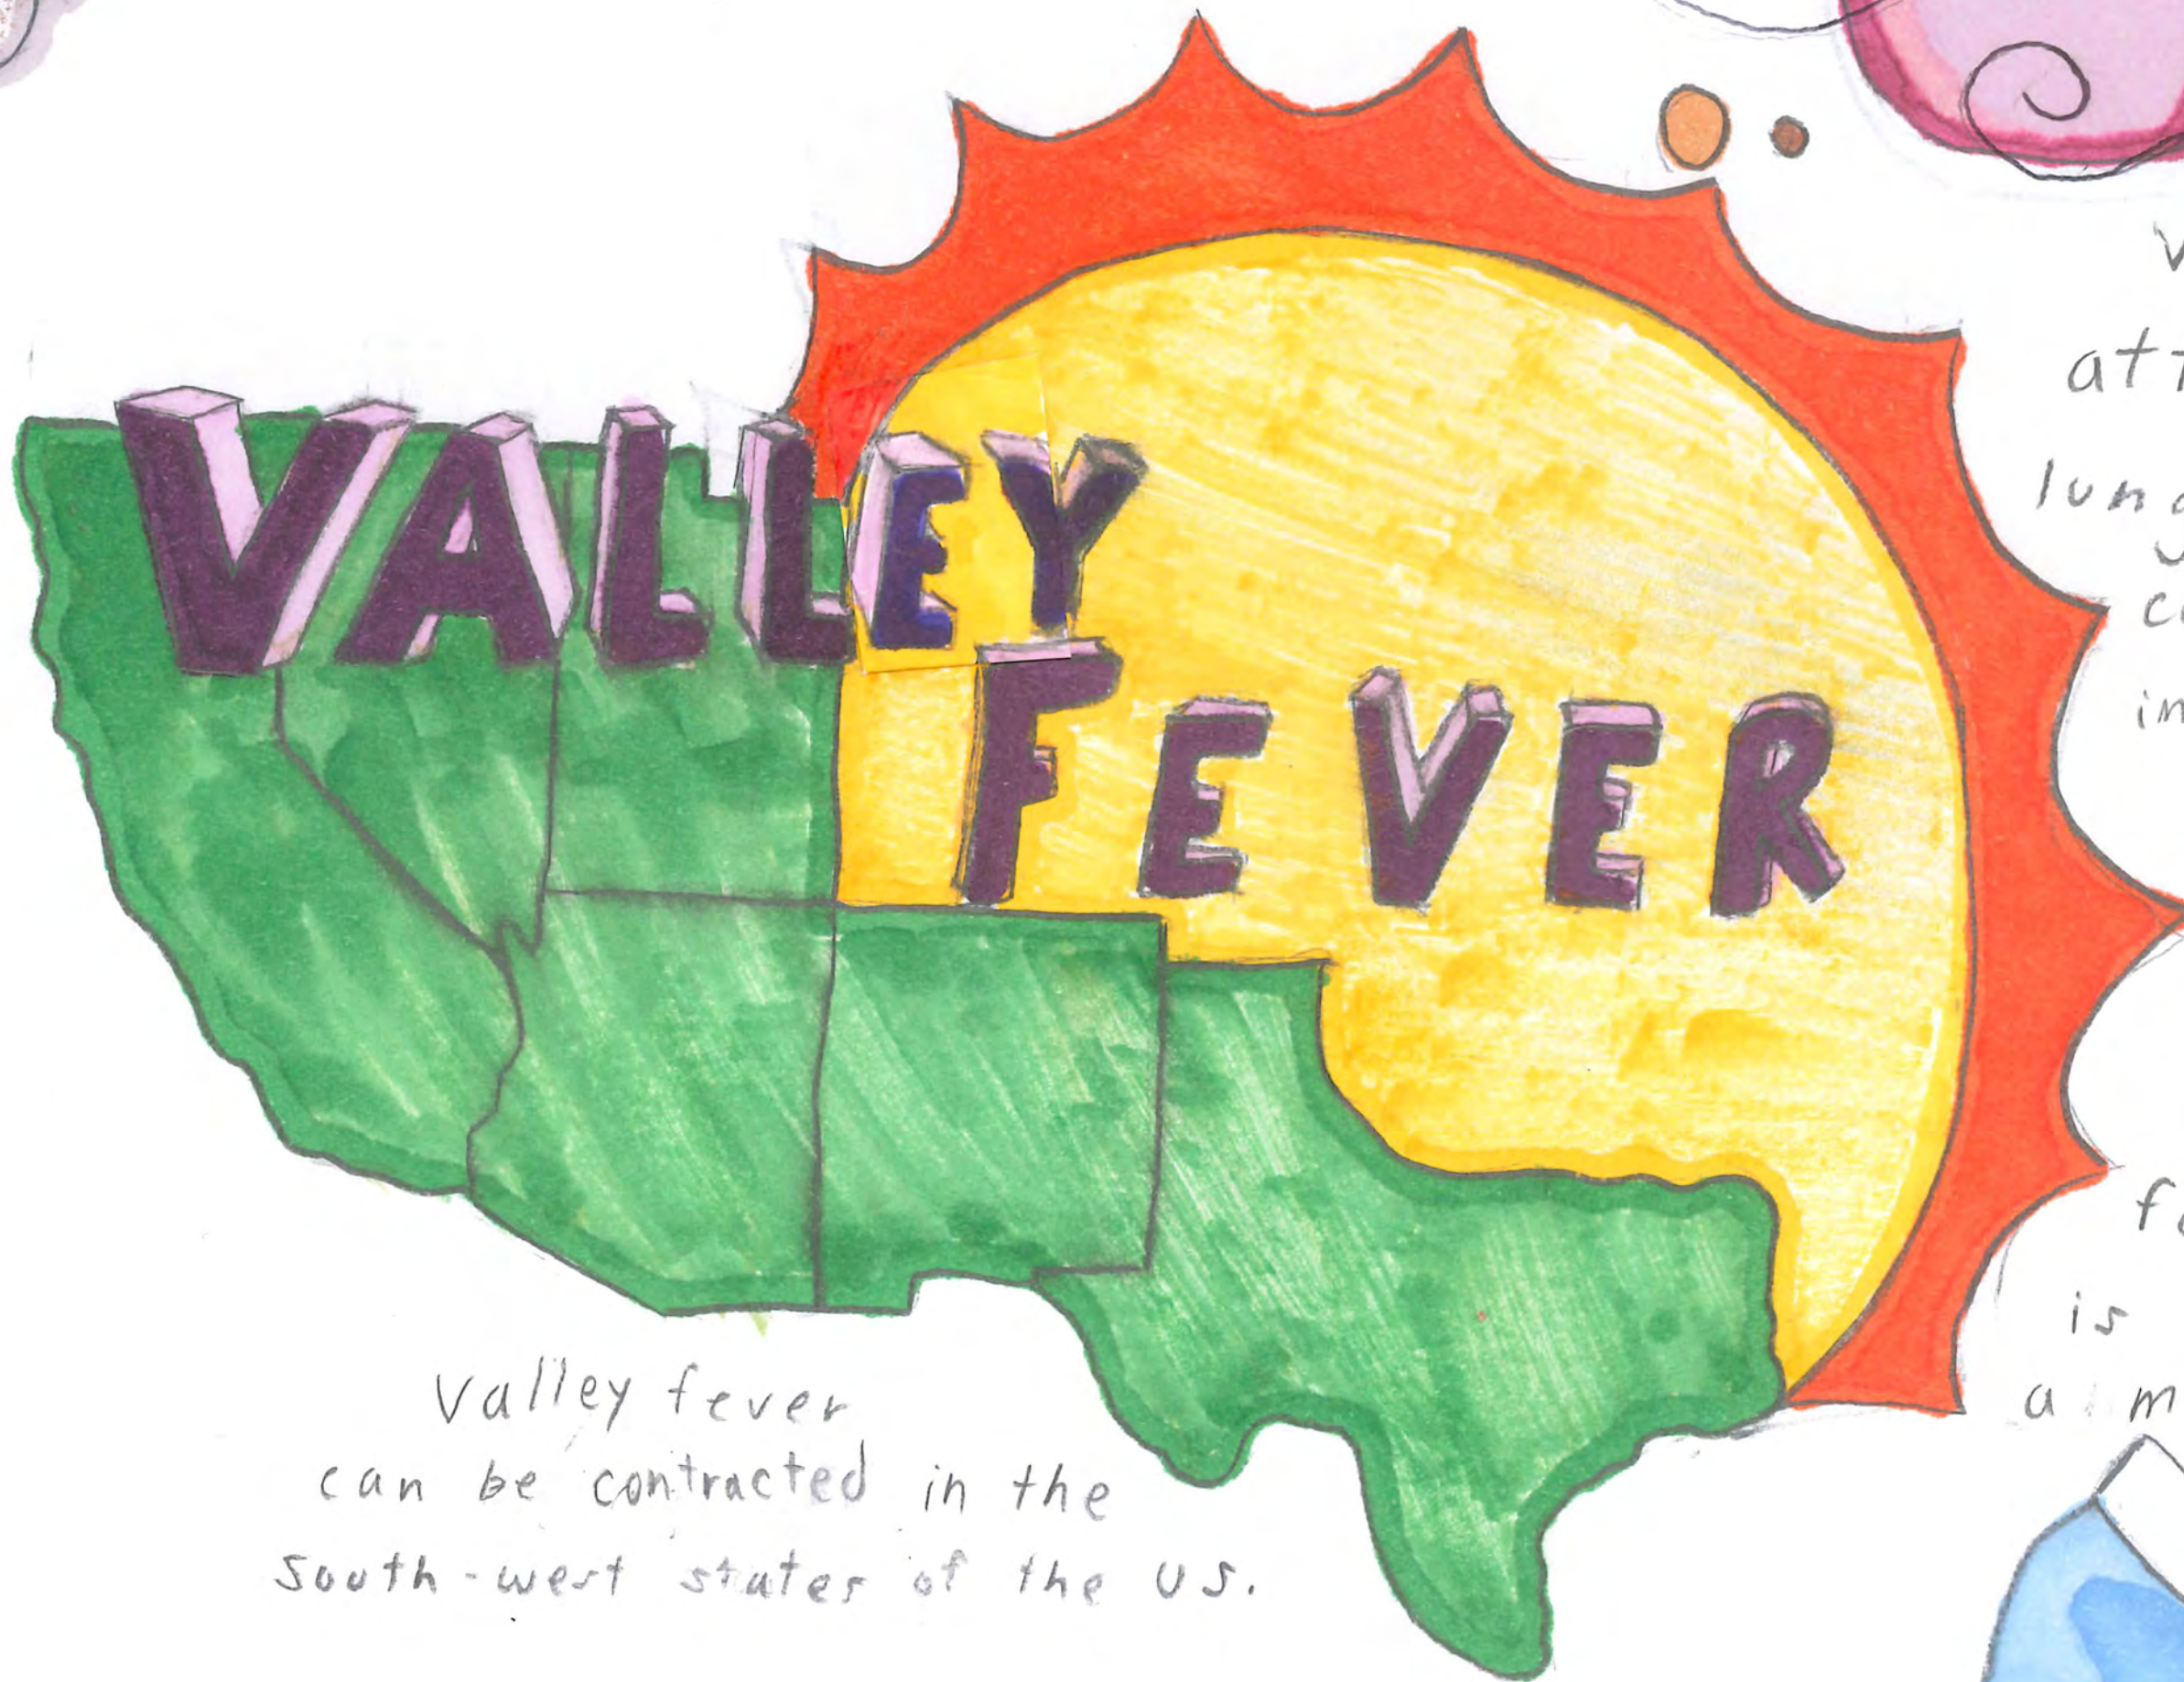

Both humans and animals can get Valley Fever.

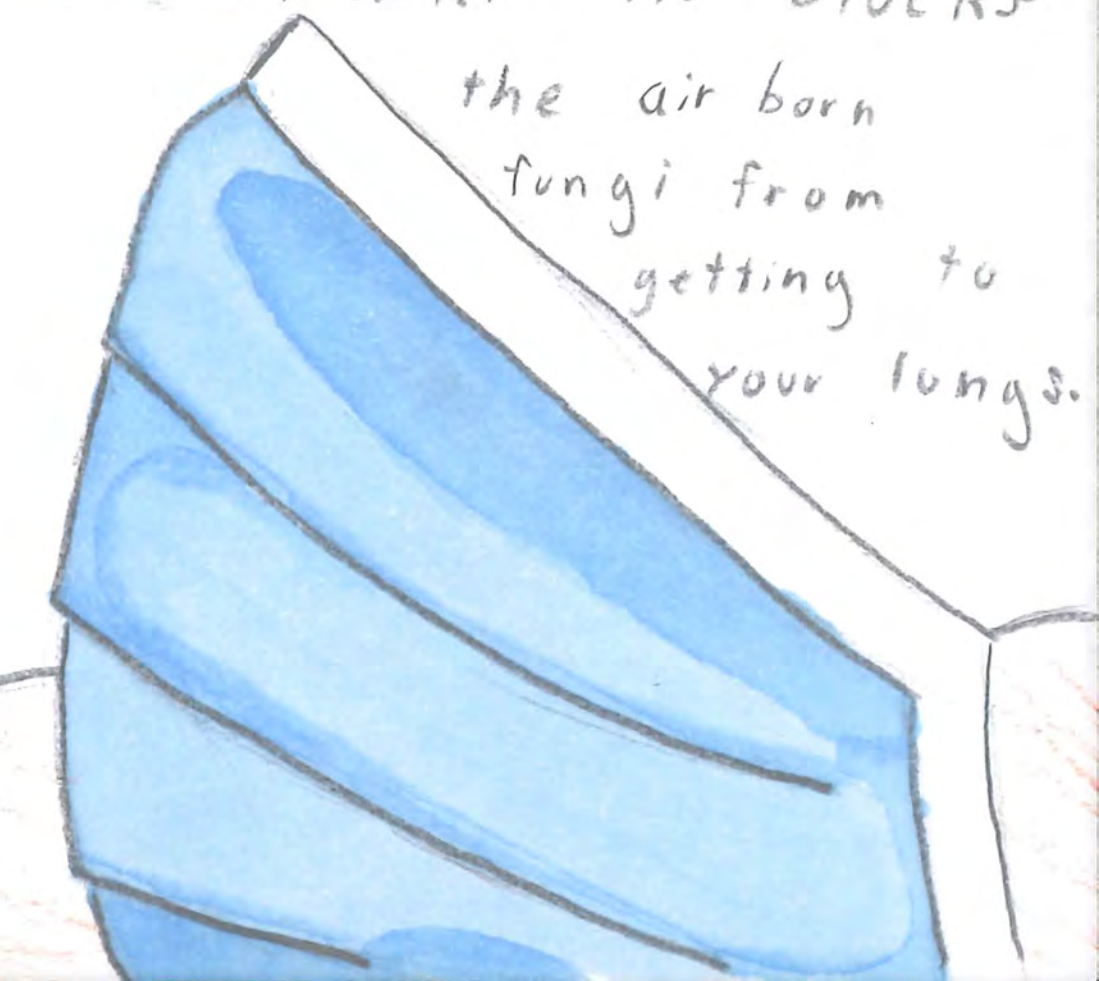

Valley Fever attacks your lungs. In extreme cases it can turn into meningitis.

You can get valley fever by breathing in the *Coccidioides* fungus.

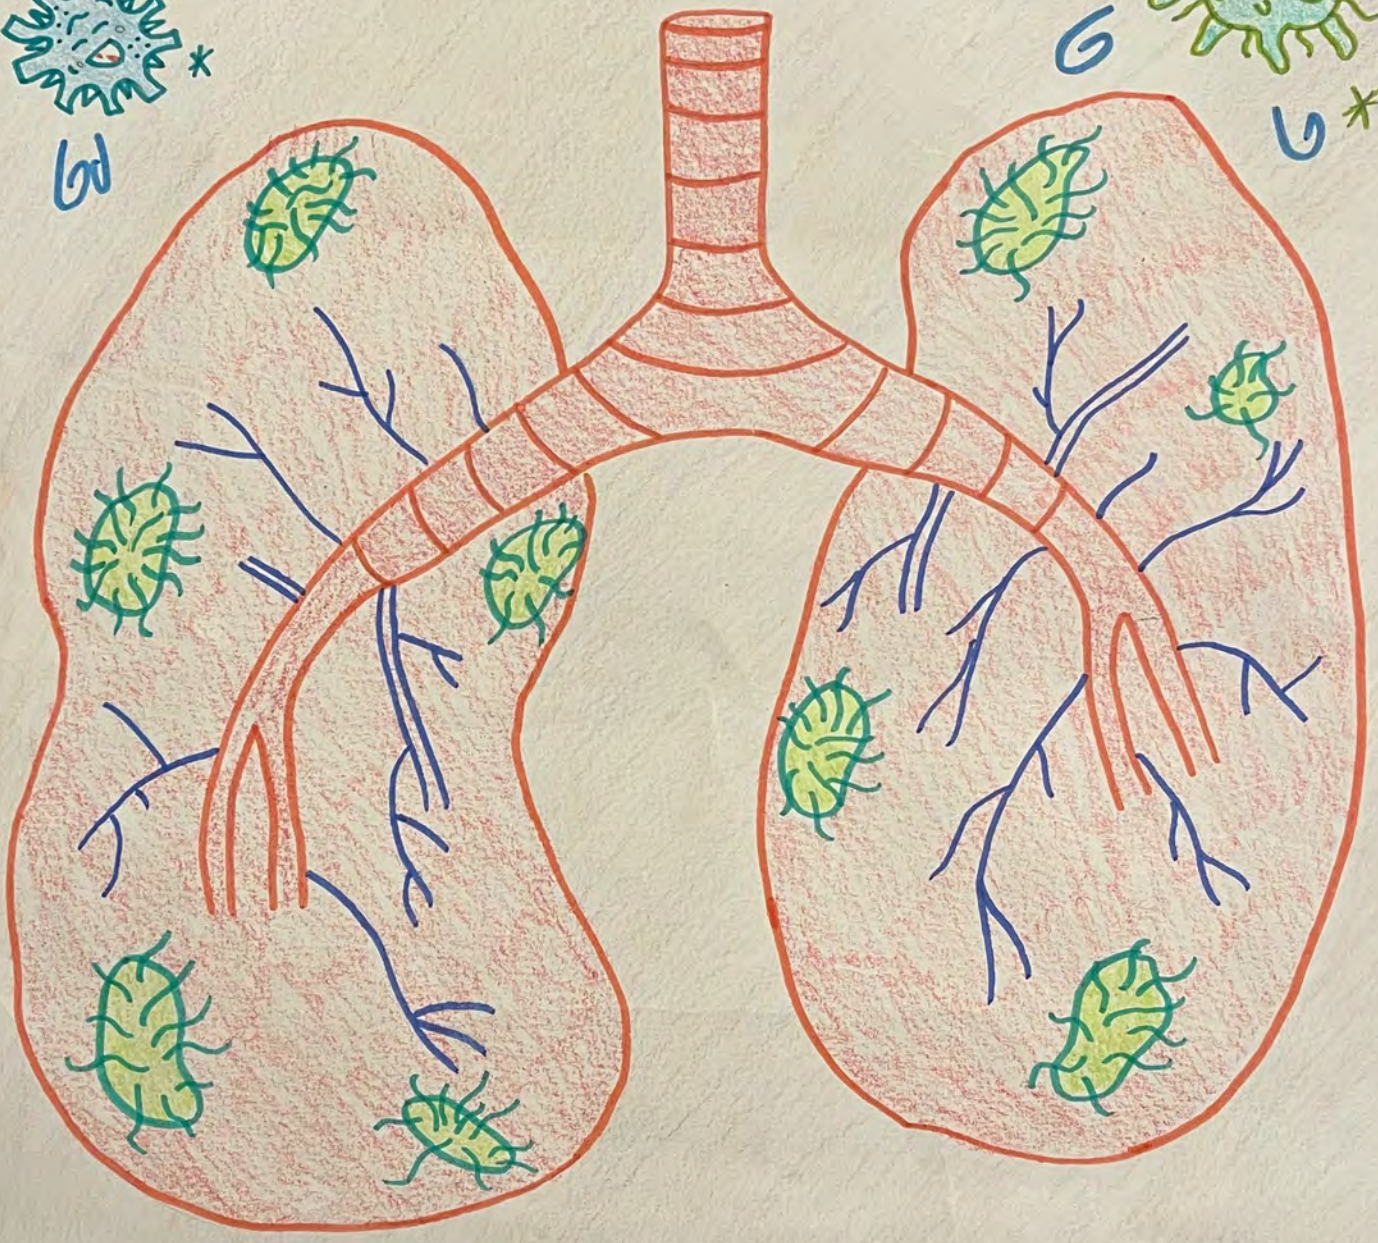

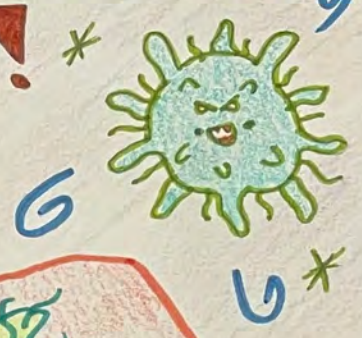

Valley fever can be contracted in the south-west states of the US.

A repellent for valley fever is to just wear a mask. This blocks the air born fungi from getting to your lungs.

Valley Fever Poster Content - 2022
 Submitted by Ms. Shasthina at the morning special assembly,
 Vidyalaya Pratibha, Tiruchirappalli
 November 2022
 10.1 Children of different National backgrounds (NCBS) were children with Autism
 (later mentioned) who need a specific requirement, or with intellectual, hearing, vision,
 speech or learning difficulties, gifted children with advanced academic abilities, and children
 with special learning requirements.
 However, those who were the students who differ socially, mentally, or physically,
 and emotionally, from the average to such an extent that they require modifications of usual
 social expectations, or special services to meet their unique needs. We have students from
 all over the world, they play more of the same and like to be. They all struggle with
 difficulties following routines, waiting for their turn, making, something or working in a group
 they expect that their hard work pays off. It took about three weeks for them to finish the
 project altogether.

Valley fever and Corona
 has similar symptoms but
 the causes and treatment
 of both is different.
